Degree: B.E - CSE

NeoColab_REC_CS23231_DATA STRUCTURES

REC_DS using C_Week 2_COD_Question 1

Attempt : 1 Total Mark : 10 Marks Obtained : 10

Section 1: Coding

1. Problem Statement

Your task is to create a program to manage a playlist of items. Each item is represented as a character, and you need to implement the following operations on the playlist.

Here are the main functionalities of the program:

Insert Item: The program should allow users to add items to the front and end of the playlist. Items are represented as characters. Display Playlist: The program should display the playlist containing the items that were added.

To implement this program, a doubly linked list data structure should be used, where each node contains an item character.

Input Format

The input consists of a sequence of space-separated characters, representing the items to be inserted into the doubly linked list.

The input is terminated by entering - (hyphen).

Output Format

The first line of output prints "Forward Playlist: " followed by the linked list after inserting the items at the end.

The second line prints "Backward Playlist: " followed by the linked list after inserting the items at the front.

Refer to the sample output for formatting specifications.

Sample Test Case

```
Input: a b c -
Output: Forward Playlist: a b c
Backward Playlist: c b a
Answer
#include <stdio.h>
#include <stdlib.h>
struct Node {
char item;
  struct Node* next;
  struct Node* prev;
}:
// You are using GCC
void insertAtEnd(struct Node** head, char item) {
 struct Node*Newnode=(struct Node*)malloc(sizeof(struct Node));
 Newnode->item=item:
 Newnode->next=NULL;
 if(*head==NULL){
   Newnode->prev=NULL;
   *head=Newnode;
   return;
```

```
while(tail->next!=NULL){
    tail=tail->next
      tail->next=Newnode;
      Newnode->prev=tail;
    void displayForward(struct Node* head) {
      //type your code here
      struct Node*Position=head:
      int c=0:
      while(Position!=NULL){
         printf("%c ",Position->item);
       Position=Position->next;
         C++;
      printf("\n");
    void displayBackward(struct Node* tail) {
      struct Node*current=tail;
      while(current!=NULL){
         printf("%c ",current->item);
         current=current->prev;
      }
      printf("\n");
    void freePlaylist(struct Node* head) {
      //type your code here
      struct Node*position=head;
      while(position!=NULL){
         struct Node*next=position->next;
         free(position);
         position=next;
      }
    }
    int main() {
      struct Node* playlist = NULL;
        ...e (1) {
scanf(" %c", &item);
      char item;
    while (1) {
```

```
oif (item == '-') {
break;
}
                                                                                  240/01495
                                                       240701495
         insertAtEnd(&playlist, item);
       struct Node* tail = playlist;
       while (tail->next != NULL) {
          tail = tail->next;
       }
       printf("Forward Playlist: ");
       displayForward(playlist);
                                                                                   240707495
     printf("Backward Playlist: ");
       displayBackward(tail);
       freePlaylist(playlist);
       return 0;
     }
                                                                           Marks: 10/10
     Status: Correct
